

As both an amateur radio operator and an executive in the power industry, I am well aware of the problems with spurious emissions today from power lines. BPL will be even worse as there is insufficient shielding, maintenance and grounding on power lines and transmission poles to mitigate the damage.

This proposal is not well thought out and is inherently a bad idea. To proceed down this road will cause an effect on all radio transmissions, civilian - amateur - and military, that will not be easy to rectify.

Please consider carefully and reject this proposal for the mistaken poor intention it is.

Thank you.
